

BANDAS POLIFLEX® JB®

La construcción de las bandas JB (Joined Belt= banda unida) proporciona estabilidad de operación, lo que evita que pudieran voltearse o salirse de la transmisión. Única con ángulo de 60°, construcción de poliuretano para altas cargas y velocidades, en transmisiones más esbeltas que las convencionales con bandas V.

Mercados/Aplicaciones

Usar en lugar de las Polyflex sencillas en transmisiones que las requieran en combo.

Algunas de las aplicaciones incluyen máquinas herramienta, periféricos computacionales, equipo médico, pequeños instrumentos, soplador de transmisiones y mezcladores de masas.

Características/Ventajas

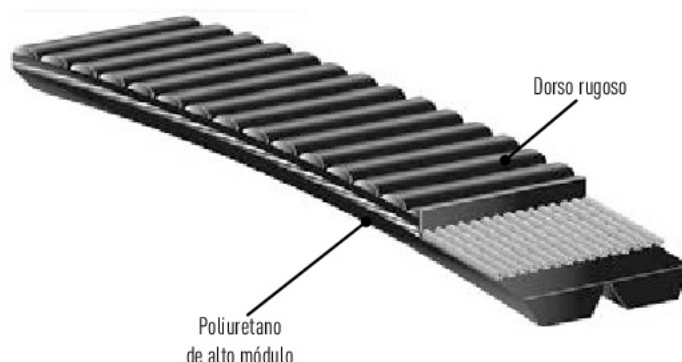

- Alto módulo de los compuestos de poliuretano que resisten fatiga, uso, ozono y demás condiciones ambientales.
- El proceso de fabricación es una sola colada, lo cual elimina la vibración.
- Su dorso dentado proporciona excelente estabilidad lateral y suaviza el esfuerzo al circular por poleas de diámetros pequeños.
- Trabaja en rangos de temperatura: -54°C a +85°C (-65°F a 180°F)
- La construcción unida de la banda proporciona alta estabilidad, previniendo que la banda se voltee o se salga.

Poleas recomendadas:

Poleas Polyflex.

Notas

Las bandas Polyflex JB están disponibles en 3M, 5M, 7M, y 11M. El número de parte de la banda Polyflex JB está comprendido del número de bandas unidas, longitud efectiva y "JB" que significan construcción Joined Band. Por ejemplo, la nomenclatura de la 3/5M1000JB representa 3 bandas unidas, 5mm de ancho por cada una con longitud efectiva de 1000mm (JB). Puede aplicar tiempos de entrega para bandas con más costillas de las listadas. No aplica lote mínimo para bandas de longitudes listadas.
